Average Rating

Relationship between the price of coffee and its rating, considering different origins and roast

Type of Roast ◆ Dark ◆ Light ◆ Medium ◆ Medium-Dark ◆ Medium-Light ◆ Unspecified

The scatter plot displays the relationship between the price of coffee (USD per 100g) on the x-axis and the average rating on the y-axis. The x-axis ranges from \$0 to \$1,000, and the y-axis ranges from 85 to 95. The data points are categorized by roast type: Dark (blue), Light (dark blue), Medium (cyan), Medium-Dark (magenta), Medium-Light (green), and Unspecified (yellow). The plot shows a general trend where higher-rated coffee tends to be more expensive, but there is significant overlap between the different roast types. The 'Medium-Light' roast category shows a wider range of prices, extending up to \$1,000, while 'Dark' and 'Light' roasts are concentrated at lower prices. 'Medium-Dark' roasts are mostly clustered at lower prices and ratings. 'Unspecified' roasts are scattered across the lower price range.

Country that contributes most to coffee production

A world map illustrating the countries that contribute most to coffee production. The size of the purple circles is proportional to the production volume. The largest circle is in Brazil (447.00), followed by Ethiopia (147.00), Colombia (135.00), and Indonesia (130.00). Other countries shown include Mexico (11.00), Peru (10.00), Honduras (5.00), Guatemala (3.00), Liberia (3.00), Ivory Coast (2.00), Kenya (2.00), Tanzania (2.00), India (2.00), and Pakistan (2.00). The map includes a scale bar (1000 km / 1000 mi) and a legend for the circle sizes.

Country	Production Volume
Brazil	447.00
Ethiopia	147.00
Colombia	135.00
Indonesia	130.00
Mexico	11.00
Peru	10.00
Honduras	5.00
Guatemala	3.00
Liberia	3.00
Ivory Coast	2.00
Kenya	2.00
Tanzania	2.00
India	2.00
Pakistan	2.00
